127 Hayes-Healy Hall

**Title:** 21st Century Publishing at Springer Mathematics

**Abstract:**

Yellow books have lined offices in math departments around the world for decades, and Notre Dame mathematicians have a long history of contributing to those titles. While we continually see new books and journal articles tracking advances in mathematics, it is not so easy to know how the world of publishing is evolving to better suit the 21st century reader. Join us to learn the finer points of Notre Dame's library subscription to the Springer electronic collection, and how this resource can be maximized to benefit researchers through to undergraduates. Whilst you make the most of these tools—from downloadable PDFs of seminal texts, through to low-cost print copies and open sharing of the latest journal content—Springer continues to push the boundaries of how publishers contribute to the scientific community. Learn about publishers' initiatives to deliver access to the developing world, improve author indexing across disciplines, and develop open access pathways.
