Title: Triple Your Latexing Speed

Abstract:

In this talk I will discuss a highly efficient workflow for editing latex documents. Specifically, I will be discussing the text editor Vim, and a variety of add-ons and customizations I have introduced. More information, including installation materials and instructions for OS X users, can be found at <http://davidkarapetyan.com/computing.php>. Though geared towards Mac users, much of the material in this talk is applicable to Linux and Windows users as well.
